

## Non-ferrous alloys for coins and sensitive strips

Influence of deformation level upon mechanical properties of coin alloys

Content of nickel silver:

Cu – 54,8%, Zn-32%, Ni-7%, Mn-6%,Al-0,2%

Content of German silver:

Cu-75%, Ni-25%

Economical alloyed alloys nickel silver and German silver and also technology of sensitive monetary strip manufacturing are developed. Production of strips has been realized at Artyomovsky Plant for treatment of non-ferrous metal; about 1,5 million jubilee and current coins were being made during 1998-1999.
