

Radiation resistant stone-casting material (SCM)

High chemical, corrosion and radiation resistances guarantee the growing up of the durability of SCM; up to 10 years under the keeping, up to 300-500 years under the graving.

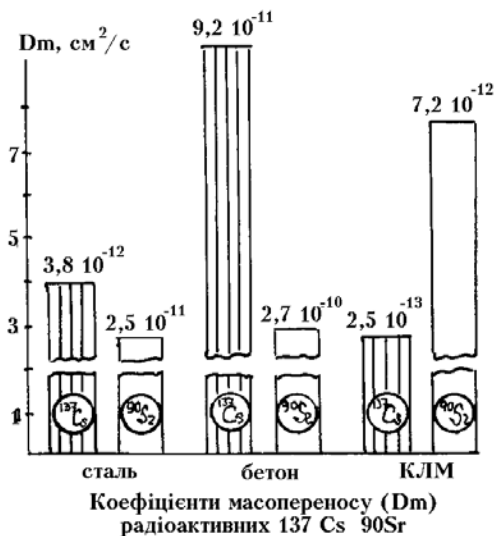

SC

M is

recommended to making the two-layer containers for transporting and keeping radiation wastes of low and middle activity.

Koefficient of mass transfer (D_m) of radio-active ^{137}Cs and ^{90}Sr

Velocity of penetration (V_m) of radio-active ^{137}Cs and ^{90}Sr from the liquid medium
