

## Technology for die casting of steel profiling products

Technology provides manufacture of high-quality large-shape overhead products of complex form with thin sides by casting into gravity die with using of ceramic and sand mould core.

- Metal capacity is up to 150 kg.
- Sizes of equipment for casting are up to 1100 mm.
- External diameter of products of compressor wheel type is up to 600 mm.
- Period of mould filling under pressure lasts up to 60 sec.

The technology permits to produce casting of wide range from carbon and alloyed steels.
